Serial: 09/801609
Art Unit: 2173
Examiner: Detwiler
Docket No. AUS9 2001 0009 US1

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1 (currently amended). An information system, comprising:

a client device comprising processing means and storage, wherein the client device is suitable for connecting to a network and includes a client application configured to generate a client request, receive information from the network, and present the received information to a user as audio information; and

a server device connected to the network and configured to provide information to the client device responsive to the client request;

wherein the system is configured to determine when at least a portion of the information provided by the server is unsuitable for presentation to the user as audio information by the client and wherein the system is further configured to respond to the determination by ~~{taking an action selected from the group consisting of}~~ storing the unsuitable portion of the information for subsequent access by the user, ~~providing a visually enhanced version of the provided information to the user, and providing portions of the information suitable for audio presentation to the user.~~

2 (canceled).

3 (original). The system of claim 1, wherein the client comprises a talking browser configured to convert Hypertext Markup Language (HTML) information to audio information.

4 (original). The system of claim 1, wherein determining that the information provided by the server is unsuitable includes determining that the request was initiated by a talking browser by comparing a user agent field of the request against a list of talking browser user agent fields.

5 (original). The system of claim 1, further comprising a proxy server intermediate between the server, wherein the proxy server determines that the requested information is unsuitable for presentation to the client.

6 (original). The system of claim 1, wherein the client data processing device communicates with the network via a wireless link.

7 (original). The system of claim 6, wherein the client data processing device is located on a vehicle.

8 (currently amended). The system of claim 1, wherein storing the information for later access by the user comprises assigning a dynamically generated URL to the stored information, creating a link indicating ~~{where}~~ the ~~{stored information is located}~~ dynamically generated URL, and emailing the link to the user.

9 (original). The system of claim 1, wherein storing the information for later access comprises emailing the retrieved information to the user.

10 (currently amended). A method of information transfer in a data processing network, comprising:

initiating a client request for information from a server on the network, wherein the client is suitable for presenting information to a user as audio information;

responsive to the request, retrieving the requested information from the server, wherein the requested information includes information not suitable for presentation as audio information;

determining that the retrieved information includes information not suitable for audio presentation and, responsive thereto, ~~{taking an action selected from the group consisting of storing the requested information for subsequent retrieval}~~ presenting a visually enhanced version of the requested information to the user, ~~and presenting the portions of the information suitable for audio presentation to the user~~.

11 (original). The method of claim 10, wherein determining that information requested by the client is unsuitable for presentation by the client includes determining that the request was initiated by a talking browser.

12 (original). The method of claim 11, wherein determining when requested information is unsuitable further comprises determining that the requested information includes information unsuitable for audio presentation.

13 (original). The method of claim 12, wherein determining that the request was initiated by a talking browser comprises comparing a user agent field of the request against a list of known talking browser user agent fields.

14-16 (canceled).

17 (original). The method of claim 10, further comprising requesting the user whether the user wishes to store the requested information.

18 (currently amended). A computer program product residing on a computer useable medium for transferring information from a server to a client on a data processing network, comprising:

computer code means for determining when at least a portion of information requested by the client is unsuitable for presentation by the client; and

computer code means, responsive to determining that the requested information includes [unsuitable] information unsuitable for audio presentation, for taking an action selected from the group consisting of storing the requested information for subsequent retrieval by the ~~{user,}~~ user and providing a visually enhanced version of the requested information to the user, ~~and providing suitable portions of the requested information to the user via the client.~~

19 (original). The computer program product of claim 18, wherein the code means for determining that information requested by the client is unsuitable for presentation by the client includes code means for determining that the request was initiated by a talking browser.

20 (canceled).

21 (original). The computer program product of claim 20, wherein the code means includes code for determining that the request was initiated by a talking browser comprises means for comparing a user agent field of the request against a list of known talking browser user agent fields.

22 (currently amended). The computer program product of claim 18, wherein the code means for storing the requested information comprises code means for dynamically generating a URL indicative of a storage location of the requested information ~~{link indicating the location of the stored information}~~ and code means for forwarding the link to the user.

23 (original). The computer program product of claim 22, wherein the code means for forwarding the link to the user comprises code means for sending the link to the user as an email message.

24 (original). The computer program product of claim 18, wherein the code means for storing the information includes code means for forwarding the requested information to the user as an email message.

25 (original). The computer program product of claim 18, further comprising code means for requesting the user whether the user wishes to store the requested information.
